## ASE 2019 Presentation

Evaluated all patients who underwent symptom-limited treadmill exercise echo at Mayo Clinic Rochester between 2006 – 2017 Since 2006, all exercise stress echo exams have included screening diastolic parameters at rest and post-stress(14,446 patients)

- Mitral inflow E and A
- Septal e'
- Peak tricuspid regurgitation velocity

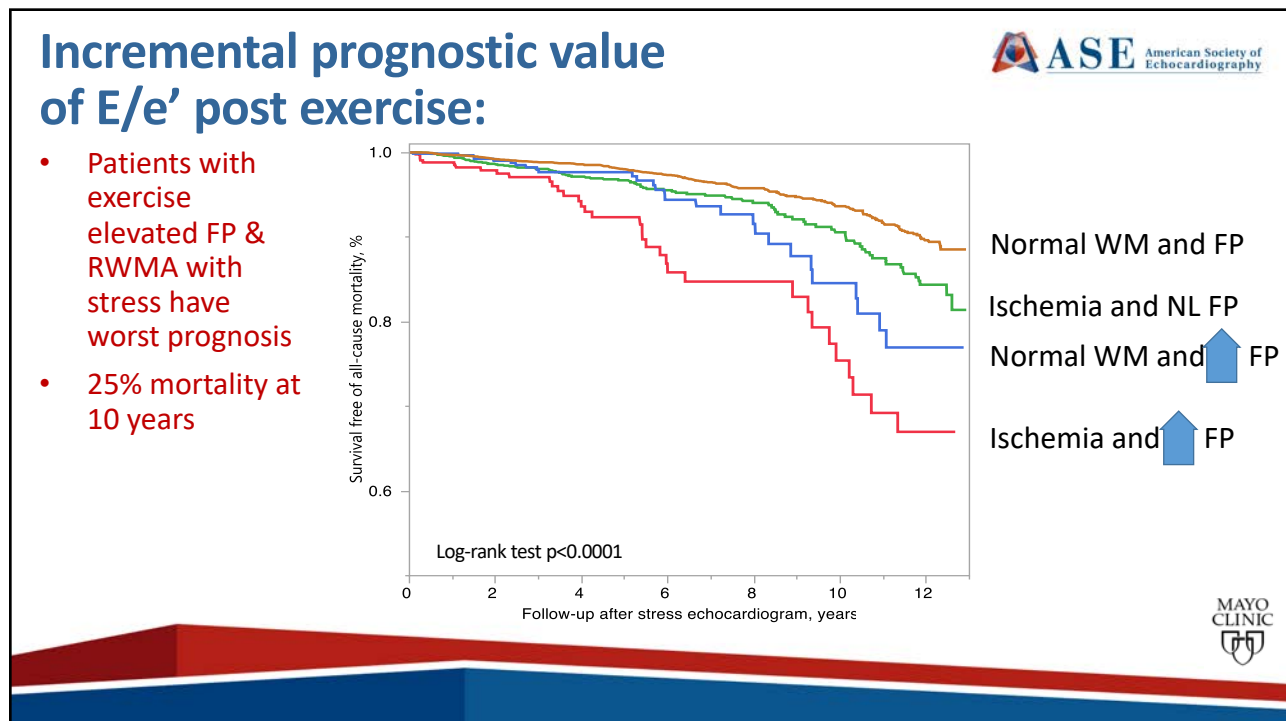

Luong and Kane et al 2019 ASE

## Unforgettable Patient

**Since I saw the next patient less than a month ago!**

5

### 54 year old woman with MVR and TVR

- History of rheumatic fever
- Mitral valve replacement with a bioprosthesis (16 yo in 1982)
- Re-do MVR with a mechanical prosthesis (28 yo in 1994)
- Severe right heart failure with severe TR in 2004 (38 yo)
- Tricuspid valve replacement with a mechanical prosthesis (2004)
- Preop-evaluation before an orthopedic surgery (Jan. 2020)
- Exertional fatigue and dyspnea.
  - JVP is mildly elevated
  - Grade 3/6 diastolic rumble

10

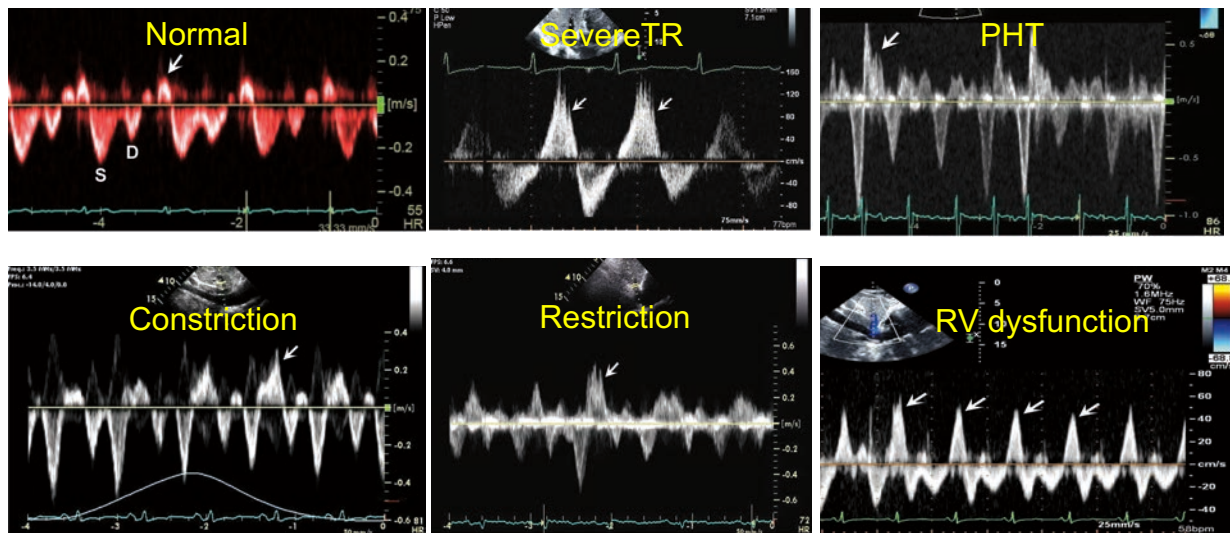

## Fluoroscopic Examination

©2018 MFMER | 3712003-11

11

## Hepatic Vein Doppler Tracings

©2018 MFMER | 3712003-12

12

13

14

## What does this CW Doppler show? 70 year old with TIPS procedure

1. Tricuspid Regurgitation
2. Subaortic Stenosis
3. Mitral Regurgitation
4. LVOT Obstruction

15

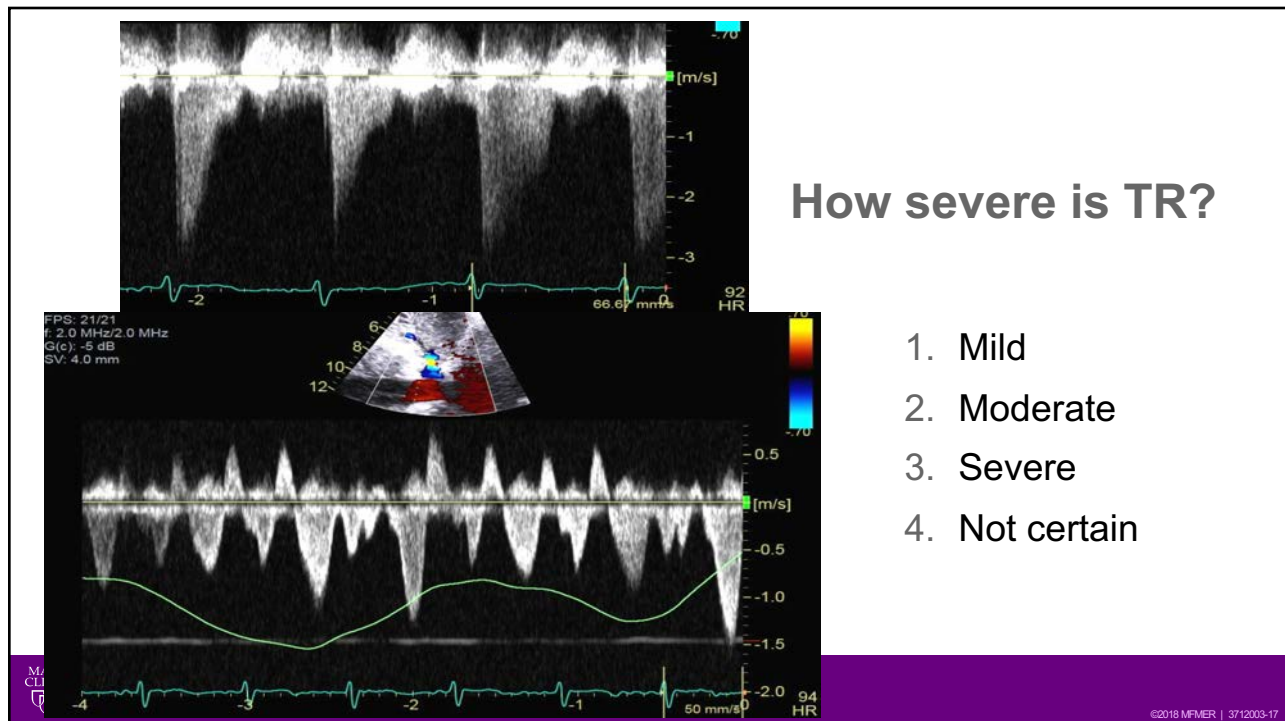

## How severe is TR?

1. Mild
2. Moderate
3. Severe
4. Not certain

16

17

18

## Increased flow from IVC and mild TR

20

## 71 year old male with exertional dyspnea Resting Echo Data

1. Exercise cath
2. Exercise echo
3. LA strain
4. Non cardiac dyspnea

21

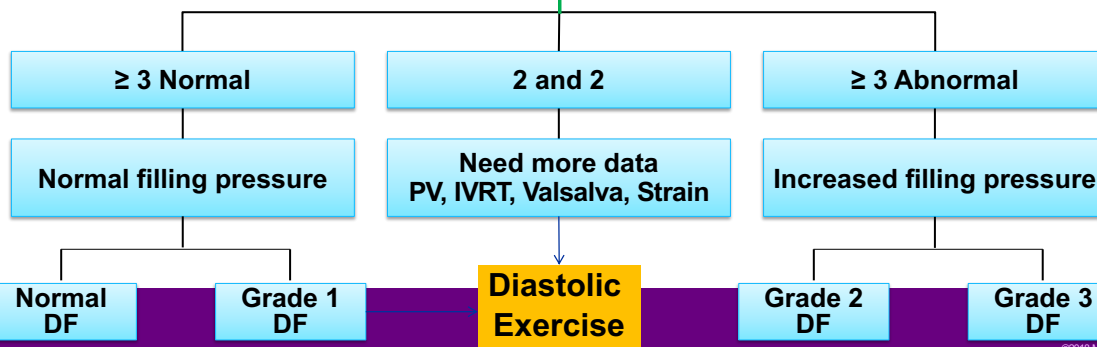

## Revised Algorithm for Diastolic Function Assessment

JACC Imaging Jan 2020

### In Most Patients

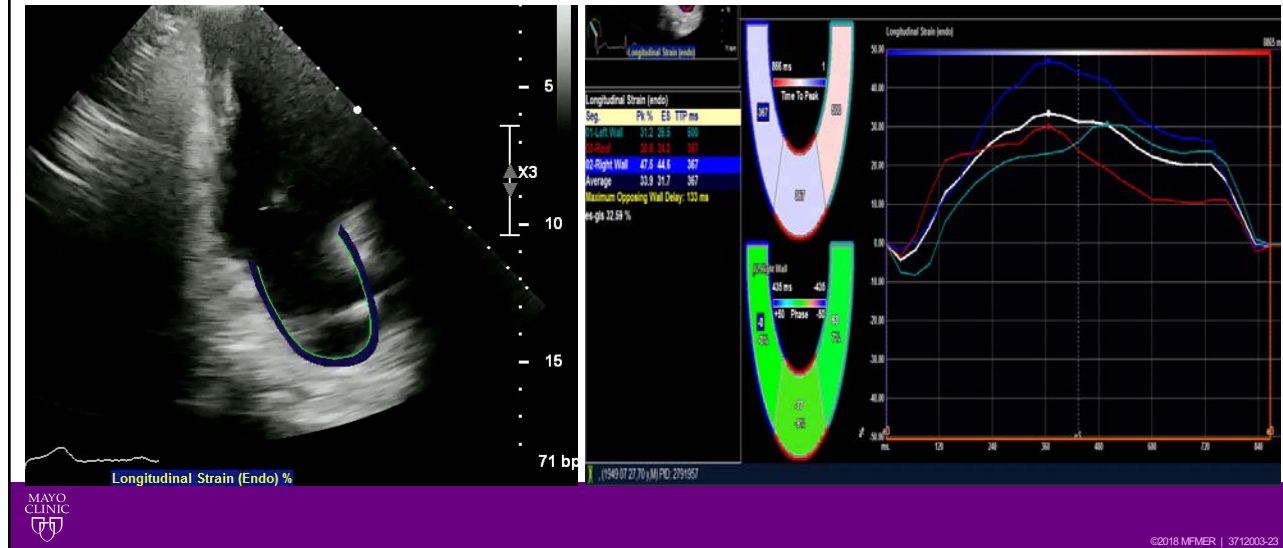

- 1 – Septal e' velocity  $\geq 7$  cm/s
- 2 – E/e'  $\leq 15$  (Med)
- 3 – TR velocity  $\leq 2.8$  m/s
- 4 – ~~LA volume index  $\leq 34$  mL/m<sup>2</sup>~~

LA strain &lt; 25%

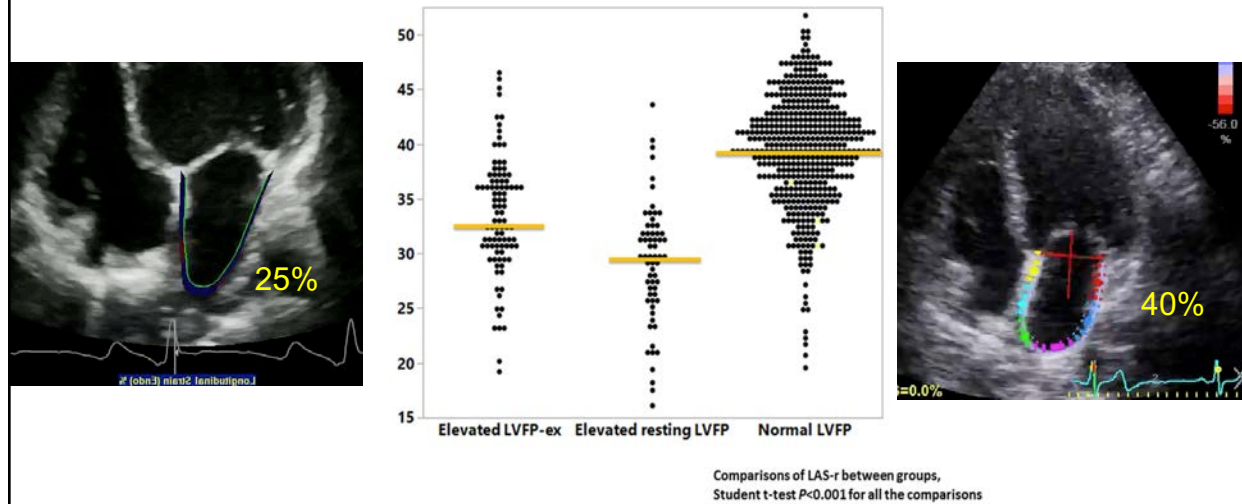

22

## Left Atrial Strain in 71 year old male with grade 1 DDF LA systolic strain 32%

23

## LA strain for detecting elevated LV Filling Pressure 563 consecutive patients with exercise echo

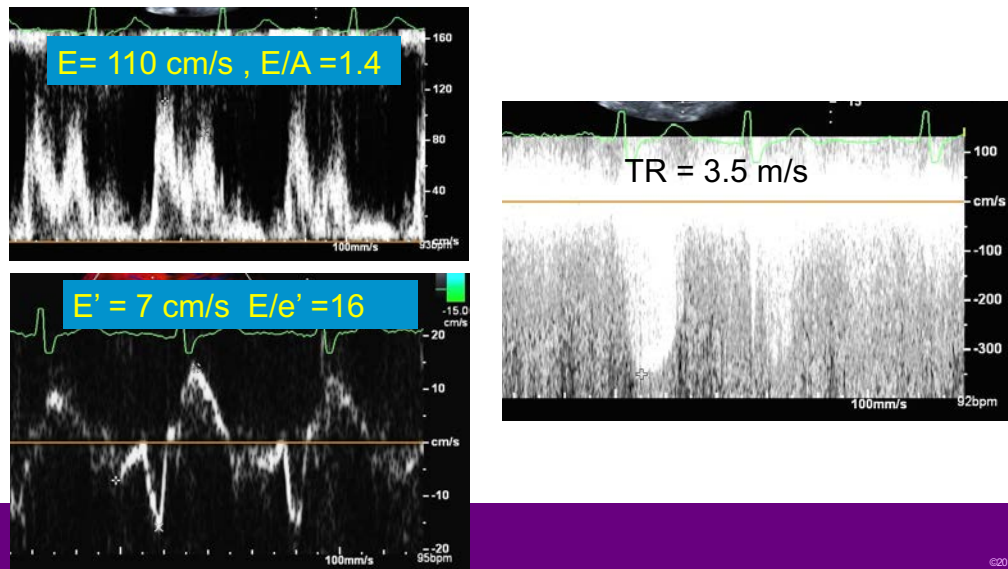

24

Z. Ye et al (Submitted)

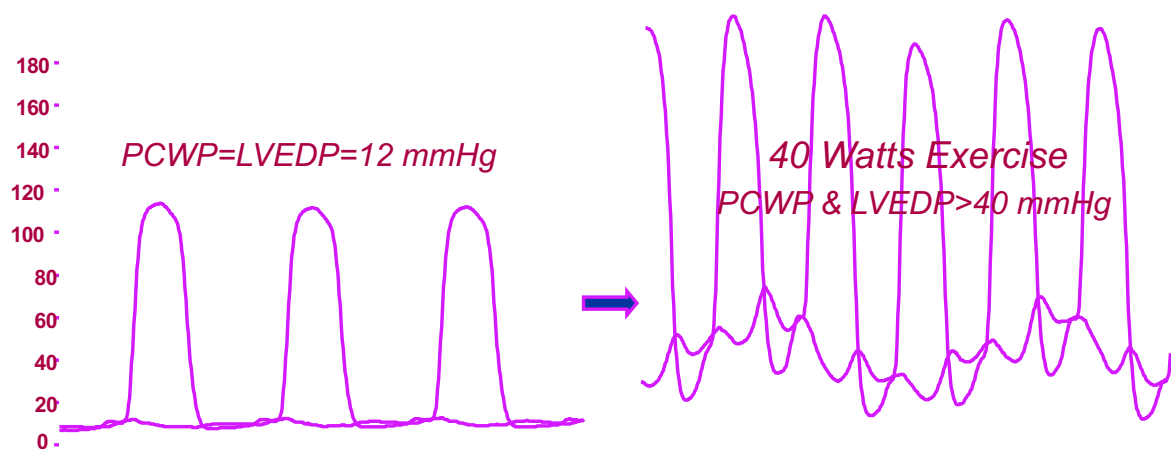

## 71 year old male with exertional dyspnea Exercise diastolic function

25

## Hemodynamic Study for HFpEF

26

27

## Conclusions

**ASE** American Society of Echocardiography

Elevated exercise LV filling pressure occurs in 10% of patients referred for exercise stress echo

- Higher prevalence in elderly patients

Exercise  $E/e' \geq 15$  is an independent predictor of mortality above and beyond ischemia, age, and exercise associated pulmonary hypertension

**MAYO CLINIC**
